PROJECTS

File Scanner – Browser-Based Malware Detection Tool

2026

Tech Stack: HTML5, CSS3, Vanilla JavaScript | GitHub: github.com/jayarajs260807-collab

- Built a standalone client-side security tool that scans files for known malware signatures using the Web Crypto API (SHA-256 hashing) — no server required, runs entirely in the browser.
- Features drag-and-drop/upload, real-time scan results with threat/clean/error states, and a blacklist-based signature matching engine.
- Demonstrates applied knowledge of browser APIs, asynchronous JavaScript (async/await, ArrayBuffer), and UI/UX design with responsive CSS.
